Living or non-living?

★☆☆
Grade 3

Learning goals

- Sort parts of ecosystems.
- Match ecosystems to places.

1 Sort the parts of a pond. [8]

SORT THESE

sunlight duck water lily fish stones frog mud water

Living	Non-living
fish	water
water lily	mud
frog	sunlight
duck	stones

2 Draw a line to match the ecosystem to the place. [4]

Draw a line to match each pair, or write the letter.

mangrove ●	→ A	● **A** Sundarbans
coral reef ●	→ C	● **B** Sunamganj haors
wetland ●	→ B	● **C** Saint Martin's Island
broadleaf forest ●	→ D	● **D** Lawachara

3 Aquatic or terrestrial? [5]

SORT THESE

coral reef stream grassland sea grass bed pine forest

Aquatic (water)	Terrestrial (land)
coral reef	grassland
stream	pine forest
sea grass bed

Why here?

★★☆
Grade 3

Learning goals

- Explain how non-living features decide what lives there.

1 Why can't a water lily grow in a dry field? [2]

It needs to grow in water; the dry field has no water for it.

2 Why can't most trees grow in the Sundarbans? [2]

The mud is salty and wet; only mangrove trees are suited to it.

3 Draw an ecosystem you know. Label two living and two non-living things. [4]

My ecosystem

e.g. a pond with fish and water lilies (living), water and stones (non-living).

Shady or sunny: where do more plants grow?

★★☆ Grade 3

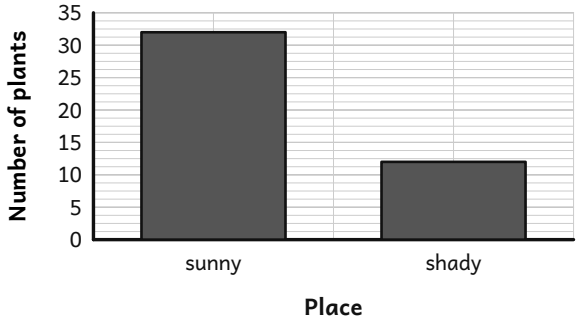

Learning goals

- Count plants.
- Compare two places.

Class 3B put a 1 metre square of string on the ground in a sunny place and in a shady place under a tree. They counted the plants inside.

1 **Draw a bar chart.** [2]

Place	sunny	shady
Number of plants	32	12

2 **Where did more plants grow? Why?** [2]

In the sunny place; plants need light to grow.

3 **Name one other non-living thing that might be different in the two places.** [1]

water in the soil, temperature

Saving the coral of Saint Martin's Island

★★★
Grade 3

Learning goals

- Learn about a special ecosystem.
- Suggest ways to protect it.

Science | Geography | Citizenship

Saint Martin's Island is the only coral island in Bangladesh. Around it live corals, colourful fish, sea snails and turtles. Corals are tiny animals that build hard homes that grow very slowly.

Every year many tourists visit. Some walk on the coral, break pieces to take home or leave plastic rubbish. Boats and new hotels also harm the reef. The government has made rules to protect the island.

Based on information about Saint Martin's Island, Bangladesh.

1 **Why is the coral reef important?** [2]

It is a home and food place for many fish, snails and turtles.

2 **Write two rules for tourists to protect the coral.** [2]

Do not walk on or break the coral; take all rubbish home; do not collect shells or coral.

3 **Make a poster to protect the coral.** [2]

Protect our coral

e.g. picture of fish and coral: "Look, do not touch!"

Show what you know

★★★
Grade 3

Learning goals

- Use ecosystem words.

1 Find the words.

I	H	A	Y	V	H	G	H	Y
N	M	U	O	E	P	C	M	U
W	W	A	F	D	F	O	I	G
E	A	S	N	F	F	R	Y	W
T	V	R	T	G	O	A	D	S
L	F	I	E	R	R	L	F	O
A	J	K	A	P	E	O	P	I
N	Y	F	J	U	S	A	V	L
D	N	F	R	K	T	N	M	E

coral forest mangrove soil stream wetland

2 Which is a non-living part of an ecosystem? [1]

○ a fish
● **sunlight**
○ a tree

3 Where is the coral reef in Bangladesh? [1]

○ Sylhet
● **Saint Martin's Island**
○ Dhaka

4 Challenge. What would happen to a pond ecosystem if the pond dried up? [2]

Fish and water plants would die; frogs could not lay eggs; ducks and kingfishers would fly away.
