Ecosystems of Bangladesh

★☆☆
Grade 3

Name: **Class:** **Date:**

Learning goals

- Explain what an ecosystem is and sort its parts into living and non-living.
- Describe land and water ecosystems found in Bangladesh.
- Explain how non-living features decide which plants and animals can live there.

An **ecosystem** is a place where **living things** (plants, animals and tiny microbes) live together with **non-living things** (water, soil, rocks, air, sunlight). They all depend on each other.

A pond ecosystem.

Ecosystems in Bangladesh

Ecosystem	Where	Some living things
wetland (haor, beel)	Sylhet, Sunamganj	water lilies, fish, ducks, frogs
broadleaf forest	Lawachara, Sylhet hills	tall trees, gibbons, birds, insects
pine forest	planted on some hills	pine trees, birds, insects
grassland	river chars, coastal areas	grasses, cattle, birds, grasshoppers
stream	hill areas	small fish, crabs, insects, water plants
mangrove	Sundarbans	sundari trees, tigers, deer, crabs, crocodiles

sea grass beds	shallow sea near the coast	sea grass, fish, turtles, sea cucumbers
coral reef	Saint Martin's Island	corals, colourful fish, sea snails

wetland

broadleaf forest

pine forest

grassland

coral reef

Non-living things decide who lives there

The **non-living** features of a place decide which plants and animals can live there: how much **water**, **light** and **heat** there is, the kind of **soil**, and whether the water is **salty** or fresh. Only special trees can grow in the salty mud of the Sundarbans. Coral needs warm, clear, salty water. Water lilies need fresh water and sunlight.

Try this at home

Look at a place near your home: a pond, a garden or a field. List the living and non-living things you can see.

Key words

ecosystem	living and non-living things in a place, depending on each other
aquatic	in water
terrestrial	on land
wetland	land covered with water for much of the year
coral reef	a hard home built by tiny sea animals called corals

FACT CHECK · A4 · ECOSYSTEMS

Living or non-living?

★☆☆
Grade 3

Name: _____ **Class:** _____ **Date:** _____

Learning goals

- Sort parts of ecosystems.
- Match ecosystems to places.

1 Sort the parts of a pond. [8]

SORT THESE

sunlight duck water lily fish stones frog mud water

Living	Non-living

2 Draw a line to match the ecosystem to the place. [4]

Draw a line to match each pair, or write the letter.

mangrove ●	● **A** Sundarbans
coral reef ●	● **B** Sunamganj haors
wetland ●	● **C** Saint Martin's Island
broadleaf forest ●	● **D** Lawachara

3 Aquatic or terrestrial? [5]

SORT THESE

coral reef stream grassland sea grass bed pine forest

Aquatic (water)	Terrestrial (land)

THINK IT THROUGH · A4 · ECOSYSTEMS

Why here?

★★☆
Grade 3

Name: Class: Date:

Learning goals

- Explain how non-living features decide what lives there.

1 **Why can't a water lily grow in a dry field?** [2]

2 **Why can't most trees grow in the Sundarbans?** [2]

3 **Draw an ecosystem you know. Label two living and two non-living things.** [4]

My ecosystem

Shady or sunny: where do more plants grow?

★★☆
Grade 3

Name: **Class:** **Date:**

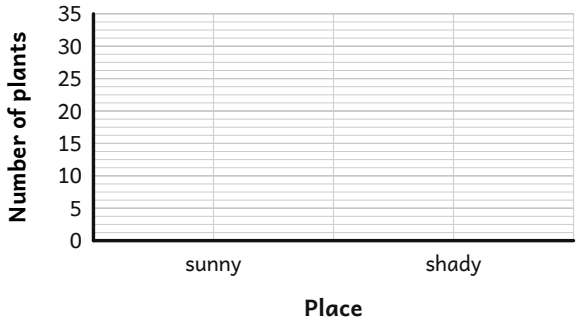

Learning goals

- Count plants.
- Compare two places.

Class 3B put a 1 metre square of string on the ground in a sunny place and in a shady place under a tree. They counted the plants inside.

1 **Draw a bar chart.** [2]

Place	sunny	shady
Number of plants	32	12

2 **Where did more plants grow? Why?** [2]

.....

.....

3 **Name one other non-living thing that might be different in the two places.** [1]

.....

Saving the coral of Saint Martin's Island

★★★
Grade 3

Name: **Class:** **Date:**

Learning goals

- Learn about a special ecosystem.
- Suggest ways to protect it.

Science · Geography · Citizenship

Saint Martin's Island is the only coral island in Bangladesh. Around it live corals, colourful fish, sea snails and turtles. Corals are tiny animals that build hard homes that grow very slowly.

Every year many tourists visit. Some walk on the coral, break pieces to take home or leave plastic rubbish. Boats and new hotels also harm the reef. The government has made rules to protect the island.

Based on information about Saint Martin's Island, Bangladesh.

1 **Why is the coral reef important?** [2]

2 **Write two rules for tourists to protect the coral.** [2]

3 **Make a poster to protect the coral.** [2]

Protect our coral

2 Which is a non-living part of an ecosystem? [1]

- ◯ a fish
- ◯ sunlight
- ◯ a tree

3 Where is the coral reef in Bangladesh? [1]

- ◯ Sylhet
- ◯ Saint Martin's Island
- ◯ Dhaka

4 Challenge. What would happen to a pond ecosystem if the pond dried up? [2]

How am I doing? Colour or tick a circle.

I can...	Not yet	Nearly	Got it!
