Space objects

★☆☆
Grade 3

Learning goals

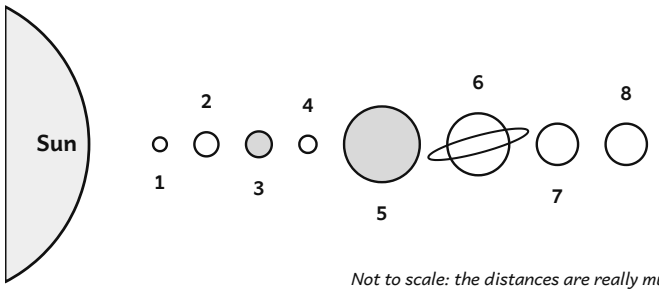

- Name space objects.
- Order the planets.

1 Draw a line to match. [5]

Draw a line to match each pair, or write the letter.

star ●	→ E	● **A** travels around a planet
planet ●	→ D	● **B** a shooting star
moon ●	→ A	● **C** sends TV and phone signals
meteor ●	→ B	● **D** travels around a star
satellite ●	→ C	● **E** a ball of hot glowing gas

2 Write the planets in order from the Sun. [8]

Not to scale: the distances are really much, much bigger.

1	2	3	4	5	6	7	8
Mercury	Venus	Earth	Mars	Jupiter	Saturn	Uranus	Neptune

3 True or false? [3]

Statement	True	False	If false, correct it
1. The Sun is a star.	✔		
2. The Moon makes its own light.		✔	The Moon reflects light from the Sun.
3. Jupiter is the biggest planet.	✔

THINK IT THROUGH · B1 · SOLAR SYSTEM

Thinking about space

★★☆
Grade 3

Learning goals

- Explain how the solar system works.

1 **Why does the Moon shine at night if it has no light of its own?** [2]

Sunlight bounces off (reflects from) the Moon to our eyes.

2 **What keeps the planets going around the Sun?** [1]

○ wind
● **gravity**
○ magnets

3 **What did Copernicus say? Why was it a big new idea?** [2]

That the Earth and planets go around the Sun. Before, people thought everything went around the Earth.

INVESTIGATE · B1 · SOLAR SYSTEM

Build a model solar system

★★☆
Grade 3

Learning goals

- Make a model.
- Say what a model shows and what it cannot show.

You will need

balls of clay or paper in different sizes, string, card, glue, a big sheet of paper.

Make the Sun in the middle and put the eight planets in order around it. Make Jupiter and Saturn the biggest planets and Mercury the smallest.

1 **Draw your model and label the planets.** [4]

My solar system model

Sun in the middle; planets in the correct order with Jupiter biggest.

2 **What does your model show well?** [1]

the order of the planets and which are bigger

3 **What can't your model show?** [1]

The real sizes and huge distances; the planets moving.

REAL-WORLD CASE STUDY · B1 · SOLAR SYSTEM

Bangladesh in space: Bangabandhu Satellite-1

★★★
Grade 3

Learning goals

- Learn how satellites help people.

Science | Technology | History

In **May 2018**, Bangladesh's first satellite, **Bangabandhu Satellite-1**, was launched into space on a rocket from the United States. It travels far above the Earth.

The satellite sends **TV** and **internet** signals to people all over Bangladesh, even on islands and in hills where it is hard to put cables. Weather satellites from other countries also help Bangladesh see cyclones coming.

Based on information about Bangabandhu Satellite-1.

1 **What is an artificial satellite?** [1]

A machine people send into space to orbit the Earth.

2 **How does the satellite help people in Bangladesh?** [2]

It sends TV and internet signals to all parts of the country.

3 **Design your own satellite. What job would it do?** [2]

My satellite

e.g. a weather satellite with cameras and solar panels to warn of cyclones.

REVIEW AND CHALLENGE · B1 · SOLAR SYSTEM

Show what you know

★★★
Grade 3

Learning goals

- Use space words.

1 Find the words.

G	E	V	M	M	V	V	J	J
E	A	E	L	N	O	T	U	W
P	R	M	H	R	M	O	C	H
L	T	V	S	U	N	E	N	W
A	H	E	M	K	J	O	T	U
N	L	W	H	S	T	A	R	P
E	J	O	R	B	I	T	U	R
T	W	C	K	G	T	J	I	O
S	M	A	R	S	K	K	T	U

earth mars moon orbit planet star sun

2 How many planets are in our solar system? [1]

○ 6
● 8
○ 10

3 A shooting star is really a... [1]

○ star
● meteor
○ planet

4 Challenge. Why do you think there is life on Earth but not on Mercury? [2]

Earth has water, air and the right temperature; Mercury is too hot by day and too cold by night with no air.
