Helping or harming?

★☆☆
Grade 4

Learning goals

- Sort human actions.
- Use reduce, reuse and recycle.

1 Sort the actions. [6]

SORT THESE

using a cloth bag **planting trees** **throwing plastic in a river** **leaving lights on** **cleaning a beach** **hunting wild birds**

Helps the environment	Harms the environment
planting trees	throwing plastic in a river
using a cloth bag	hunting wild birds
cleaning a beach	leaving lights on

2 Write reduce, reuse or recycle for each action. [4]

Action	Reduce, reuse or recycle?
taking a water bottle from home instead of buying one	reduce
using an old tin as a pencil pot	reuse
taking newspapers to the paper collector (*bhangari*)	recycle
printing on both sides of the paper	reduce

3 Fill in the gaps. [4]

WORD BANK

deforestation **habitat** **extinct** **sanctuary** **recycling** **pollution**

Cutting down forests is called deforestation. An animal that has died out everywhere is extinct. Harmful things in the air or water are called pollution. A protected forest for animals is a wildlife sanctuary.

Problems and solutions

★★☆
Grade 4

Learning goals

- Explain human impacts on living things.
- Suggest solutions.

1 **For each problem, explain how it harms animals or plants and suggest a solution.** [6]

Problem	How it harms	Solution
forests cut down for farms	animals lose food and homes	protect forests; plant new trees; farm without cutting more forest
factories pour dirty water into rivers	fish and plants die	clean the water before it leaves the factory; check with laws
too many young fish are caught	not enough fish grow up to breed	use bigger net holes; stop fishing in the breeding season

2 **Long ago, people in Bangladesh carried shopping in jute bags and baskets. Today many use plastic. How has this change affected the environment?** [2]

Plastic does not rot, so it blocks drains and rivers, causes floods and harms animals; jute bags rot away and can be reused many times.

3 **Why is it important to tell others about caring for the environment?** [2]

Many people acting together make a much bigger difference than one person.

Our school litter survey

★★☆
Grade 4

Learning goals

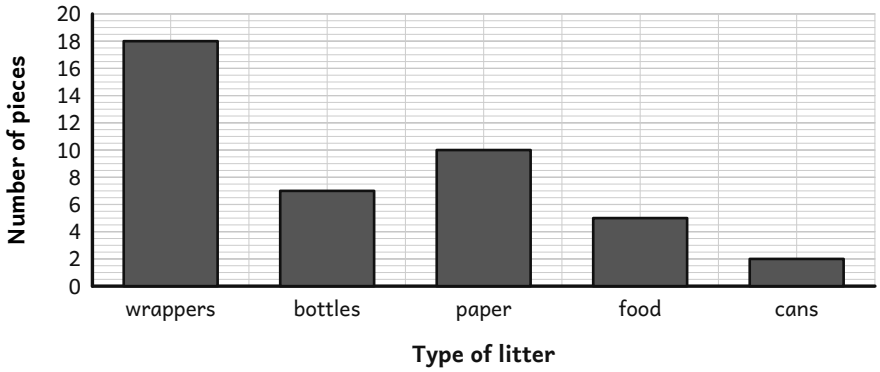

- Collect and tally data.
- Draw a bar chart.
- Plan action from evidence.

Class 4A wore gloves and collected litter from the school playground at the end of one day. They sorted it and counted each type.

1 **Complete the tally chart.** [2]

Type of litter	Tally	Total
sweet wrappers	IIII IIII IIII III	18
plastic bottles	IIII II	7
paper	IIII IIII	10
food waste	IIII	5
cans	II	2

2 **Draw a bar chart.** [3]

3 **Which type of litter was most common? Suggest why.** [2]

Sweet wrappers; children eat snacks at break time and drop the wrappers.

4 **Use the evidence to plan two actions for the school.** [2]

e.g. put bins next to the snack shop; sell snacks without wrappers; make a poster; have a weekly clean-up team.

5 **Why did they wear gloves?** [1]

Litter can be dirty or sharp and have germs.

REAL-WORLD CASE STUDY · A6 · HUMANS AND ENVIRONMENT

The golden fibre: can jute beat plastic?

★★★ Grade 4

Learning goals

- Compare materials for the environment.
- Use numbers to compare.
- Weigh up different views.

Science · History · Economics · Design · Environment

Jute is a plant that grows well in the warm, wet fields of Bangladesh. Its long stems give a strong fibre that is made into bags, sacks, rope and mats. It was once so valuable that it was called the **golden fibre**, and Bangladesh is still one of the world's biggest growers.

Plastic bags are cheap and light, but they can last for hundreds of years and block drains and rivers. Jute bags rot away naturally in a few months, and jute plants take in a lot of carbon dioxide as they grow. A Bangladeshi scientist, Dr Mubarak Ahmad Khan, has developed a bag made from jute that looks like plastic, called the **Sonali bag**.

Based on information about jute in Bangladesh and the Sonali bag. Numbers below are rounded examples.

1 **Compare a plastic bag and a jute bag.** [4]

	Plastic bag	Jute bag
made from	oil (fossil fuel)	a plant that can be regrown
time to break down	hundreds of years	a few months
can it be reused many times?	a few times	yes, many times
cost	very cheap	costs more

2 **Maths. A family uses 5 plastic bags a week. How many is that in a year (52 weeks)? How many could one jute bag replace?** [2]

5 × 52 = 260 plastic bags a year; one strong jute bag used every week could replace all 260.

3 **What might each person think about using jute bags?** [3]

Person	View
a jute farmer	More jute bags means more work and money for farmers.
a shopkeeper	Jute bags cost more; I need cheap bags for customers.
a fish in the river	Please, no more plastic in my home!

4 **Design a campaign to get your school to use jute or cloth bags. Write a slogan and two ideas.** [2]

e.g. "Go golden with jute!"; give each learner a jute bag; a no-plastic snack day; a poster competition.

I	K	F	O	R	E	S	T	E	D	V
P	G	Y	J	U	M	I	H	S	S	E

extinct **forest** **habitat** **jute** **litter** **plastic** **recycle** **reduce** **reuse**

2 Which action reduces waste? [1]

- ○ throwing old toys away
- ○ buying drinks in small plastic bottles
- ● **taking a cloth bag to the shop**
- ○ burning rubbish

3 An animal that is in danger of dying out is... [1]

- ○ extinct
- ○ migrating
- ● **endangered**
- ○ a producer

4 Draw a poster to stop people throwing plastic into rivers. [3]

My poster

A picture and message, e.g. "Rivers are not bins! Plastic kills fish."

5 **Challenge. Give one way people have helped an ecosystem in Bangladesh and one way people have harmed one. Explain both.** [3]

Helped: protecting the Sundarbans as a sanctuary lets tigers and deer survive. Harmed: polluting the Buriganga killed fish and made the water unsafe.
