FACT CHECK · A5 · FOOD CHAINS

Who does what?

★☆☆
Grade 3

Learning goals

- Sort producers, consumers and decomposers.
- Build food chains.

1 Sort them. [8]

SORT THESE

earthworm tiger mango tree grass mould goat mushroom frog

Producer	Consumer	Decomposer
grass	goat	mushroom
mango tree	tiger	earthworm
	frog	mould

2 Put these in order to make a food chain. [2]

tiger

grass

deer

grass → deer → tiger

3 Fill in the gaps. [3]

WORD BANK

decomposers predators consumers producers

Plants are producers. Animals that eat food are consumers. Worms and mushrooms are decomposers.

What if...?

★★☆
Grade 3

Learning goals

- Predict changes in food chains.

1 **In the chain grass → grasshopper → frog → snake, what would happen if all the frogs were gone?** [3]

a) to the grasshoppers?

There would be more of them.

b) to the grass?

More of it would be eaten.

c) to the snakes?

They would have less food.

2 **Why are decomposers important?** [2]

They break down dead things and put goodness back in the soil for new plants.

3 **Draw a food chain you can see near your school.** [2]

My food chain

e.g. leaves → caterpillar → bird.

INVESTIGATE · A5 · FOOD CHAINS

What makes bread go mouldy?

★★☆
Grade 3

Learning goals

- Do a fair test.
- Observe changes over time.

Class 3C put three slices of bread in bags: one dry, one damp, one damp in the fridge. They looked every day for a week.

1 **Results: days until mould appeared.** [1]

Bread	dry	damp (warm room)	damp (fridge)
Days	no mould after 7 days	3	7

2 **Which bread went mouldy first? Why?** [2]

The damp bread in the warm room: mould grows best where it is damp and warm.

3 **Is mould a producer, consumer or decomposer?** [1]

a decomposer

⚠ **Stay safe**

Never open the bags or smell mouldy bread. Throw them away sealed.

REAL-WORLD CASE STUDY · A5 · FOOD CHAINS

The frogs and the rice field

★★★
Grade 3

Learning goals

- Use a food chain to explain a real problem.

Science | Farming | Environment

Frogs live in many rice fields in Bangladesh. They eat insects that damage the rice. Some years ago, many people caught frogs to sell, and many farmers sprayed strong poisons (pesticides).

Fewer frogs meant more insects, so farmers sprayed even more poison. Now many farmers protect frogs and use fewer pesticides, so the frogs can help them again.

Based on information about frogs and pest control in rice farming.

1 **Write the food chain from the story.** [1]

rice → insects → frogs

2 **What happened when there were fewer frogs?** [2]

There were more insects that damaged the rice.

3 **How can frogs help farmers?** [2]

They eat insect pests, so farmers need less poison.

Show what you know

★★★
Grade 3

Learning goals

- Use food chain words.

1 Find the words.

S	P	K	S	W	B	A	P	F
C	O	N	S	U	M	E	R	S
R	L	I	O	W	E	U	I	U
S	V	V	C	O	Y	P	O	N
G	C	H	A	I	N	N	B	W
P	R	O	D	U	C	E	R	O
R	V	H	M	O	U	L	D	R
W	S	P	T	G	K	R	O	M
P	O	M	R	N	Y	Y	E	H

chain consumer mould producer sun worm

2 Every food chain starts with *a*... [1]

- ● **plant**
- ○ tiger
- ○ mushroom

3 Which is *a* decomposer? [1]

- ○ goat
- ● **mushroom**
- ○ grass

4 Challenge. Where does the energy in *a* food chain first come from? [1]

the Sun
