Habitats and adaptation

Name: Class: Date:

Learning goals

- Explain that animals live in habitats that suit them.
- Use a simple key to name living things.
- Explain how living things change their surroundings to meet their needs.

A **habitat** is the place where an animal or plant lives. It gives the animal **food**, **water**, **shelter** and a safe place to **raise young**. Different animals live in different habitats.

aerial *in the air* | **arboreal** *in trees* | **aquatic** *in water* | **terrestrial** *on land* | **fossorial** *under the ground*

Animals in the air, in trees, in water, on land and under the ground.

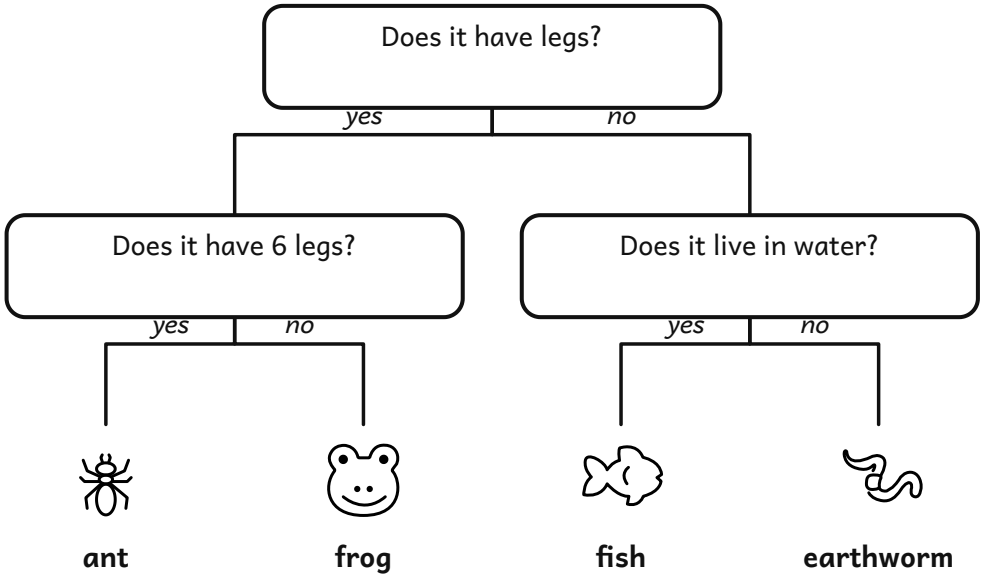

Suited to their homes

Animals have body parts that help them live in their habitat. This is called **adaptation**.

Animal	Habitat	How it is suited
fish	river, pond, sea	gills to breathe in water; fins to swim
monkey	trees	long arms and a tail for climbing
duck	pond	webbed feet for swimming; waterproof feathers
earthworm	soil	thin, slimy body for sliding through soil
camel	hot desert	stores fat in its hump; wide feet on sand

Using a key

A **key** asks yes/no questions to help you name a living thing. Start at the top and follow the answers.

A simple key.

Changing the habitat

Some animals **change** their surroundings to meet their needs. The **baya weaver** bird weaves a hanging nest from grass. **Termites** build tall mounds of mud. **Earthworms** dig tunnels. **People** build houses, dig ponds and plant gardens.

birds build nests

ants dig tunnels

worms make burrows

people build houses

Bangladesh connection

In the Sundarbans, fiddler crabs dig holes in the mud to hide when the tide comes in.

Key words

habitat	the place where a living thing lives
adaptation	a body part or behaviour that helps it survive
key	yes/no questions to name a living thing
shelter	a safe place to live and hide

FACT CHECK · A3 · HABITATS

Who lives where?

★☆☆ Grade 3

Name: _____ **Class:** _____ **Date:** _____

Learning goals

- Match animals to habitats.
- Use a key.

1 Draw a line from the animal to its habitat. [5]

Draw a line to match each pair, or write the letter.

fish ●	● **A** desert
monkey ●	● **B** soil
camel ●	● **C** cold ice
earthworm ●	● **D** forest trees
polar bear ●	● **E** river

2 Use the key on the Learn it page. Name the animal: it has legs, but not 6 legs. [1]

_____

3 Write the name of each animal under its habitat. [4]

_____

_____

_____

_____

THINK IT THROUGH · A3 · HABITATS

Why do they live there?

★★☆
Grade 3

Name: Class: Date:

Learning goals

- Explain adaptations.

1 **Why couldn't *a* fish live in *a* tree?** [2]

2 **How is *a* duck suited to living on *a* pond?** [2]

3 **Make your own key to sort *a* bird, *a* snake, *a* cow and *a* fish.** [3]

My key

INVESTIGATE · A3 · HABITATS

Where do woodlice like to live?

★★☆
Grade 3

Name: Class: Date:

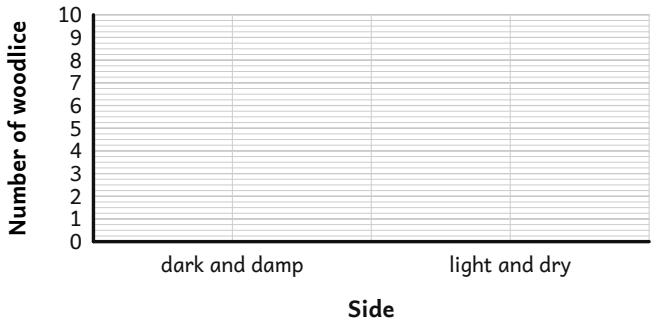

Learning goals

- Do a fair test.
- Count and compare.

Class 3A put 10 woodlice in a tray. One end was dark and damp, the other light and dry. After 10 minutes they counted them.

1 **Draw a bar chart.** [2]

Side	dark and damp	light and dry
Woodlice	9	1

2 **Where do woodlice prefer to live?** [1]

3 **Suggest why.** [2]

4 **How should they treat the woodlice afterwards?** [1]

REAL-WORLD CASE STUDY · A3 · HABITATS

The baya weaver's hanging nest

★★★ Grade 3

Name: **Class:** **Date:**

Learning goals

- Learn how an animal changes its habitat.

Science | Design | Nature

The **baya weaver** is a small bird found in Bangladesh. In the rainy season, the male weaves an amazing nest from strips of grass and palm leaves. It hangs from the tip of a branch, often over water.

The nest has a long tube for a door at the bottom. Snakes and big birds find it very hard to reach the eggs. The weaver has changed its habitat to make a safe home for its babies.

Based on the behaviour of the baya weaver (babui pakhi).

1 **How does the nest keep the eggs safe?** [2]

2 **What materials does the weaver use?** [1]

3 **Design a safe home for an animal you like. Draw and label it.** [3]

My animal home
