FACT CHECK · A4 · EATING FOR HEALTH

Food groups and nutrients

★☆☆
Grade 5

Learning goals

- Sort foods into groups.
- Match nutrients to their jobs.

1 Sort the foods into the main nutrient they give. [9]

SORT THESE

potato fish roti rice carrot spinach (palong shak) guava dal egg

Carbohydrates	Proteins	Vitamins and minerals
rice	fish	guava
roti	egg	spinach (palong shak)
potato	dal	carrot

2 Match each nutrient to its job. [5]

Draw a line to match each pair, or write the letter.

carbohydrates ●	→ E	● **A** builds strong bones and teeth
proteins ●	→ D	● **B** helps blood carry oxygen
calcium ●	→ A	● **C** helps food move through the gut
iron ●	→ B	● **D** help us grow and repair
fibre ●	→ C	● **E** give us energy

3 Fill in the gaps. [4]

WORD BANK

variety iodised vegetables cola chips decay

A balanced diet has a ___variety___ of foods in the right amounts. Half of a healthy plate should be ___vegetables___ and fruit. Eating too much sugar can cause tooth ___decay___. We should use ___iodised___ salt.

THINK IT THROUGH · A4 · EATING FOR HEALTH

Is this meal balanced?

★★☆
Grade 5

Learning goals

- Evaluate meals.
- Plan a balanced day of meals.
- Explain factors that affect food choices.

1 **Look at these two lunches. Which is more balanced? Explain your answer.** [3]

Lunch A	Lunch B
a big plate of white rice, a little dal, a fried egg, a glass of cola	rice (one quarter of plate), mixed vegetables, fish curry, a banana, water

Lunch B: it has carbohydrate, protein, vegetables and fruit in better proportions and water instead of a sugary drink. Lunch A is mostly rice and has a sugary drink and few vegetables.

2 **Plan a balanced day of meals for a 10-year-old. Include a drink each time.** [4]

Meal	Foods and drink
Breakfast	e.g. roti, egg, vegetable bhaji, water/milk
School tiffin	e.g. fruit, chira with yoghurt or a sandwich, water
Lunch	e.g. rice, dal, fish, shak, salad, water
Dinner	e.g. rice or roti, chicken or egg curry, vegetables, water

3 **Why do some families buy more instant noodles and fewer vegetables? Give two reasons.** [2]

e.g. noodles are cheap, quick and easy; advertising; children like the taste; vegetables can be expensive or not available.

4 **Why should children not drink tea, coffee or energy drinks in the evening?** [2]

They contain caffeine, which keeps the brain awake and stops children getting enough sleep.

5 **Tobacco advertising is banned in Bangladesh. Why do you think the law does this?** [2]

Tobacco seriously harms health and is addictive; banning adverts helps stop young people starting.

INVESTIGATE · A4 · EATING FOR HEALTH

How much sugar is in our drinks?

★★☆
Grade 5

Learning goals

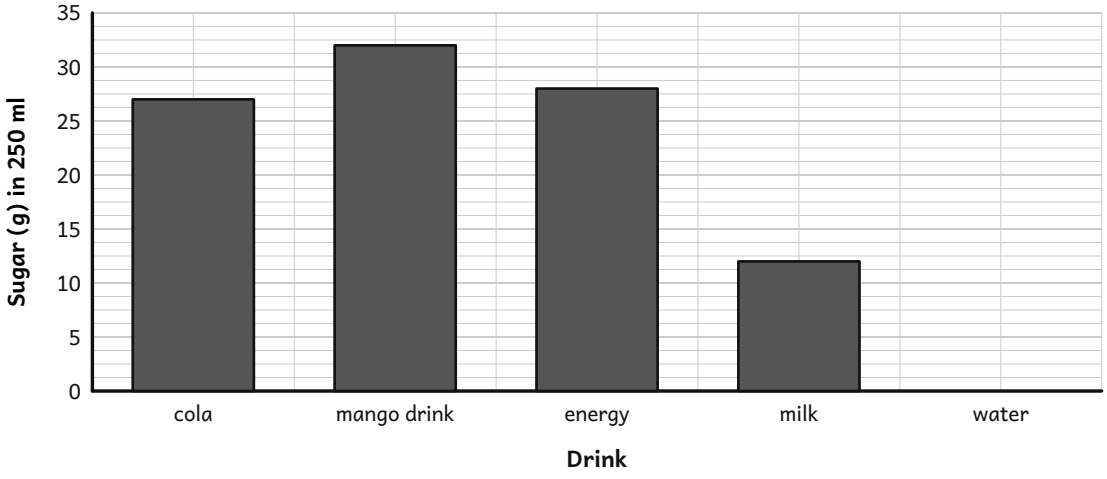

- Read information from food labels.
- Convert grams to teaspoons.
- Present and compare data.

Class 5D collected the nutrition labels from five drinks. They recorded the sugar in one 250 ml serving. (These are example values similar to real labels.)

1 **Convert the grams of sugar into teaspoons (4 g = 1 teaspoon). Round to the nearest whole teaspoon.** [5]

Drink (250 ml)	Sugar (g)	Teaspoons of sugar
cola	27	7
mango juice drink	32	8
energy drink	28	7
plain milk	12	3
water	0	0

2 **Draw a bar chart of the grams of sugar in each drink.** [4]

3 **Health experts advise that children should have no more than about 6 teaspoons (24 g) of added sugar a day.** [3]

a) Which drinks contain more than this in one serving?

cola, mango juice drink, energy drink

b) Milk contains natural sugar but is still a good choice. Why?

It also gives protein and calcium for growth and strong bones.

4 **Write a conclusion and one piece of advice for your school.** [2]

Many packaged drinks contain a lot of sugar, more than a child's daily limit in one serving. Advice: sell or bring water or plain milk instead of sugary drinks.

From panta bhat to pizza: changing plates

★★★
Grade 5

Learning goals

- Use evidence about how diets are changing.
- Weigh up cost, culture and health.
- Plan a healthy meal on a budget.

Science · Health · Maths · Culture · Economics

Fifty years ago most families in Bangladesh ate home-cooked food: rice, dal, fish and vegetables, with seasonal fruit. Many children in poor families did not get enough to eat, and many were too short for their age because of **undernutrition**.

Today the country grows much more food and fewer children are undernourished. But in towns and cities, more people buy **fast food**, fried snacks, sweets and sugary drinks, and many children spend hours on screens instead of playing outside. Doctors are seeing more children who are **overweight**, and more adults with **diabetes**.

Nutritionists say we can keep the best of both: traditional dishes such as shak, dal, small fish and seasonal fruit are cheap and very healthy, while fast food is fine as an occasional treat.

Based on reports on nutrition in Bangladesh (FAO, UNICEF, national nutrition surveys).

1 **What are the two different nutrition problems described in the text?** [2]

Undernutrition (not enough food / nutrients, children too short) and overnutrition (too much fatty/sugary food, overweight, diabetes).

2 **Plan a healthy school tiffin that costs no more than 60 taka. Use the price list.** [4]

Food	Price (Tk)
banana	10
boiled egg	15
roti (2 pieces)	10
vegetable bhaji (small box)	20
guava	15
packet of chips	20
cola (250 ml)	35
bottle of water	15

My tiffin items	Cost (Tk)
roti (2), vegetable bhaji, boiled egg	10 + 20 + 15 = 45
+ banana	45 + 10 = 55 (bring water from home)

3 **Explain why your tiffin is balanced.** [2]

It has carbohydrate (roti), protein (egg), vegetables and fruit, with water to drink and little sugar or fat.

4 **Different people have different views. What might each say?** [3]

Person	View on fast food
a fast-food shop owner	People enjoy it; it gives jobs; we could offer healthier options.
a doctor	Too much fast food and sugar causes obesity and diabetes; eat it only sometimes.
a busy working parent	It is quick and easy; healthy cooking needs time and planning.

5 **Suggest one change your school could make to help learners eat better.** [1]

e.g. sell fruit and water instead of chips and cola; a "healthy tiffin day"; a school vegetable garden.

REVIEW AND CHALLENGE · A4 · EATING FOR HEALTH

Show what you know

★★★
Grade 5

Learning goals

- Use key vocabulary.
- Answer test-style questions.

1 **Find the key words.**

C	E	V	I	T	A	M	I	N	C	A
K	N	J	P	K	K	A	G	B	N	Y
D	E	A	R	I	R	O	N	E	I	R
I	R	L	O	F	B	P	R	M	P	W
S	G	F	T	I	A	W	W	U	S	Y
U	Y	I	E	I	L	T	Y	F	H	A
G	I	B	I	C	A	L	C	I	U	M
A	R	R	N	B	N	G	W	K	J	J
R	I	E	J	I	C	J	C	C	I	T
J	E	M	S	S	E	A	L	V	H	L
W	A	T	E	R	D	N	U	W	O	N

balanced **calcium** **energy** **fibre** **iron** **protein** **sugar** **vitamin** **water**

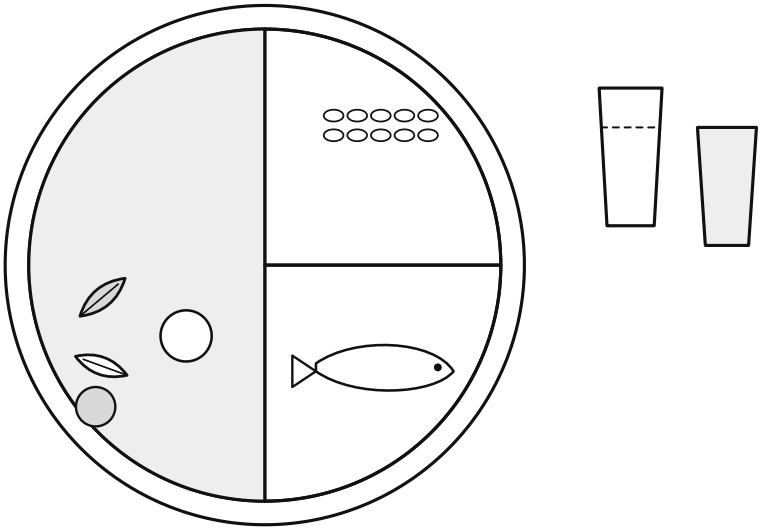

2 **Which food is the best source of protein?** [1]

- ○ rice
- ● **dal**
- ○ cola
- ○ butter

3 **Which nutrient helps blood carry oxygen?** [1]

- ● **iron**
- ○ fibre
- ○ fat
- ○ iodine

4 **Label each part of the healthy plate with a food group.** [3]

Part of the plate	Food group
the half on the left	vegetables and fruit
top right quarter	grains (rice, roti)
bottom right quarter	protein (fish, egg, dal, meat)

5 **Challenge. "Fat is bad for you, so we should never eat it." Do you agree? Explain.** [2]

No: the body needs some fat for energy, warmth and some vitamins; we should eat small amounts and avoid too much fried food.
